We have specifically kept the CBT Mass Email Sender practical and very easy to use. We have stripped out all the redundant features to make the software practical, lightweight and easy to use. The objective of the CBT Bulk Email Sender is to send out mass emails fast and achieve a high inbox rate and a good ROI for you.

How to Send Mass Emails with CBT Bulk Email Sender Desktop Software

CBT Mass Email Sender is a desktop software that runs on the Windows operating system. The purpose of this bulk email sender is to allow you to send out thousands of emails to your recipient list directly from your desktop computer or a Windows VPS.

In very simple terms, all you will need to do is

- Paste or upload your email contact list (recipients);
- Paste or upload your email accounts (for sending via SMTP);
- Enter your message
- Configure other settings
- Hit the SEND button to start sending your emails to your contacts list

Key Features of CBT Mass Email Sender Desktop Software

Support Multiple SMTP Accounts

CBT Bulk Mailer supports multiple SMTP accounts. In practical terms, this means that you can add multiple email accounts and use them to send out bulk emails. The software supports popular emails such as gmail, yahoo, hotmail, proton mail, O2.pl, Yandex, Mail.ru, Rambler, CPanel

accounts, custom SMTP servers and many more email providers. Many email accounts have daily sending limits so by having multiple SMTP accounts, you can simply rotate between each account and collectively, you will be able to send out many email messages.

Supports Direct Sending

If you do not have SMTP accounts or simply do not want to use them, you can use the direct send option. With the direct send option, the CBT Email Sender will send your email directly using the local IP and DNS server.

Robust Email Filters

CBT Bulk Email Sender has integrated filters that will allow you to avoid spam and achieve a high inbox rate. For example, you can add email accounts, domains, phrases and characters to your blacklist to skip all the problematic emails, unsubscribers and spam traps. Most email verifiers do not go far enough with cleaning your entire email list. Our blacklist filter will allow you to avoid all the bad emails that share common characteristics. You can also choose to skip emails that are longer than X number of characters as well as only send one email per domain (the latter option excludes free generic emails such as gmail, yahoo, outlook, etc and are aimed more at company emails).

Email Messages support Formatting, Macros and Spintax Format

When sending out mass emails, it is important to ensure that your emails are unique so that they can pass as many spam filters. CBT Bulk Email Sender allows you to use spintax and format your message to help you to achieve a high inbox rate. Spintax format looks like this {Hello|Hi|Good Morning}. It is created using curly brackets and pipes. All it does is it generates unique content by choosing different words and phrases on each email send.

You can also import complete Excel CSV files that you have scraped using the [CBT Web Scraper and Email Extractor](#) and then add macros to your message such as %companyname%, %website%, %email%, %Tel%, %Instagram%, %LinkedIn%, %Twitter%. This feature will make your message look more personalised. For example, if I enter Hello %companyname%, then the text would look like this "Hello Nataly's Boutique".

Complete Anonymity with Proxies

CBT Mass Email Sender supports proxies. It is advisable to use SOCKS4 and SOCKS5 proxies for email sending. Proxies will hide the identity of your local IP address. Having a good number of

proxies will help you to achieve a better inbox rate and reduce risk of blacklisting. Proxies are recommended if you plan to run the CBT Mass Email Sender on multiple threads.

Auto Resume Email Sending

In case of a crash or simply if you want to power off your computer for the night, you can always resume from where the CBT Bulk Email Sender left off the next time you start the software.

Save your Project

You can save your project and run it at any time. This will save you from having to reenter the same details again.
